WORK EXPERIENCE

Engineer 1 - Cloud

Apr 2026 - Present

CrowdStrike

Pune (Hybrid)

- Engineered a distributed, cron-driven batch job-processing platform in Go that fans out workloads into **10,000+** concurrent per-customer child jobs, processing **200M+ asset** records per day with checkpoint/resume and bounded-concurrency backpressure for restart-safe execution at scale.
- Designed and shipped a two-phase usage-metering pipeline (sampling and aggregation) over a 256-way sharded object store that powers a customer usage dashboard, deduplicating assets across product lines with bitmask Venn-set computation to emit accurate billable-usage metrics for **18K+ enterprise** customers.
- Migrated product-specific logic out of shared platform services into a new OpenSearch-backed microservice with its own Kafka event stream, building the steady-state rehydrate job, gRPC scheduling endpoints, and a resumable bulk-migration script spanning **2,800+ customers**.
- Hardened a **Cassandra/ScyllaDB-backed** state store handling millions of quorum operations per run by resolving write-timeout storms and metering data-loss regressions with bounded delete concurrency, idempotent processing, and application-level retries

Software Engineer

Jun 2024 - Mar 2026

Netcore Cloud

Mumbai

- Integrated MongoDB CSFLE across 15 microservices handling **2M+ daily events**, achieving encryption at rest with less than **50 ms P99** latency overhead on read heavy workloads.
- Built a path optimization API using the **Thompson Sampling** multi armed bandit algorithm, reducing API latency from **180 ms to 125 ms** (30 percent improvement) and serving **50K+ requests per day**.
- Implemented rate limiting using a token bucket and circuit breaker patterns with **Hystrix-go**, reducing cascading failures by **80 percent** and preventing 15+ production incidents over 6 months.
- Built an alerting backend with structured logging using **Zap** and distributed tracing using **Jaeger**, reducing mean time to detection from **15 minutes to 3 minutes** across 9 production services.
- Deployed and managed 12 Go microservices on **Kubernetes (EKS)**, implementing CI/CD pipelines with automated testing and health checks that maintained **99.9 percent** uptime while handling **100K+ requests per hour** in production.
- Designed and maintained backend services and RESTful APIs for high-scale production systems, collaborating closely with product and platform teams.
- Tech Used:** Go, Goroutines, Terraform, Java, MongoDB, PostgreSQL, Kubernetes (EKS), Argo CD, AWS, Docker, Helm, Jaeger, Zap, Kibana, Git, Hystrix-go, REST APIs, CI/CD

SKILLS

Programming Languages: Go, Rust, Java, Python

Frameworks: Gin, Spring Boot, React.js, gRPC, RESTful APIs, WebSocket, FastAPI, Flask

Databases: PostgreSQL, MySQL, MongoDB, Redis, SQL, ClickHouse, Database Design

Cloud & DevOps: AWS (Lambda, EC2, S3, API Gateway), Docker, Kubernetes (EKS), Jenkins, GCP (GKE), Argo CD, CI/CD, Terraform

Tools: Git, GitLab, Maven, Grafana, Kibana, Jira, Confluence, Swagger, Prometheus, Elasticsearch, Unit Testing

AI Fluency: Claude Code, Cursor, Copilot, RAG, Agentic Programming, AI automation tools

AWARDS

AI Agents League by Netcore Cloud

Best Demonstrated Impact at **AI Agents League** by Netcore Cloud for developing **SmartAlert**, an AI powered alerting system

Coding Contests

- Secured top 2.16 percent worldwide (Rank 1610) in Google Farewell Round A
- LeetCode** Knight (1975 rating), top 5 percent globally with 2000+ problems solved
- Global Rank 173 in **CodeChef** April Cook Off 2022 (Div 2)

EDUCATION

Bachelor of Technology in Computer Science

Jul 2020 - Jun 2024

Technocrats Institute of Technology

GPA: 9.18/10

PROJECTS

PionBid (Live)

- Built a **real time bidding** platform with **anti sniping** and deterministic ordering, achieving **sub 100 ms** bid fan out in local tests
- Architected a **single writer** per auction goroutine state machine with **anti sniping** soft close, **deterministic ordering**, and **backpressure aware** fan out with critical event eviction for high burst traffic
- Tech Stack:** Go, Pion WebRTC, WebSocket, Gorilla Mux, Next.js (React, TypeScript), Tailwind, Vercel, Render
